

# COLEUS

## OVERVIEW

Prized for their colorful foliage, which may combine shades of green, yellow, pink, red, rust

## WATER

Water twice a day during hot weather. Outdoor containers may require water twice a day. Indoor plants need water only when the top inch of soil feels dry to the touch.

## LIGHT

Some coleus varieties handle full sun, but most do well with dappled shade and direct sun limited to morning hours. Intense midday sunlight scorches the foliage; too little light causes weak growth

## SOIL

Prefers consistently moist, rich, well-draining soil. Before planting, amend the soil with compost or another organic material.
