

DUSTY MILLER

OVERVIEW

An annual bedding plant with grey or silver leaves that grows about 10in tall.

WATER

One inch of water per week is enough to keep silver dust growing strong. It does not like soggy conditions.

LIGHT

Prefers full to partial sun. Needs at least 4 hours of sun exposure a day. But it's drought resistant and can survive.

SOIL

Thrives in acidic clay to sandy loam soils. The soil must be well-draining to avoid root rot.
