

# SENECIO

## OVERVIEW

Large genus of succulents with a variety of habits, from trailing to upright. Depending on habit varieties can be used in hanging baskets, ground cover, or specimen plants in low water succulent gardens.

## WATER

Prefer deep infrequent water during the growing season. Apply less supplemental water during their dormant period.

## LIGHT

Needs bright light, but is not particularly heat tolerant. Needs protection from direct light in hot climates, but in cooler or indoor areas does best with full sun.

## SOIL

Plants require loose, well drained soil.
